

Snow Removal & Winterization Services

Prepare Your Roof for Winter

Snow, ice, and freezing temperatures can take a toll on your roof and building operations. Nations Roof provides certified snow removal and winterization services to help facilities stay safe, compliant, and operational all season long. From preventive inspections to emergency response, our crews are ready to protect your assets.

Warning Signs of Overloading or Ice Damage

- Severe leaks or new ponding water areas
- Ice dams forming around drains, gutters, or parapets
- Ripples or bends in metal supports, cracked wood members
- Loud popping or creaking noises
- Doors or windows suddenly sticking
- Sagging ceiling tiles or bowed conduit

If you see these signs, it's time to act.

Our Snow Removal & Winterization Process

- Clear snow and ice from drains, gutters, and critical areas first
- Remove snow in balanced strip patterns to prevent uneven loads
- Use plastic tools and safety barricades to prevent damage to roof membranes
- Focus on drifted or unbalanced snow loads first
- Apply safe, approved deicing products where appropriate
- Inspect for damage to seams, flashings, and rooftop equipment after clearing
- Never use blowers, picks, or hot water that could harm your roof
- Avoid snow dumping or stockpiling in ways that create unsafe, concentrated loads

Why Partner with Nations Roof

24/7/365 National Service Center for rapid response

1,100+ self-performing roofing professionals nationwide

Certified, warranty-compliant crews trained in safe snow and ice management practices

0.47 EMR safety rating, exceeding OSHA standards
